**DETAILED ACTION**

***Election/Restrictions***

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

- 1) Tunable sensor using energy other than acoustic to tune sensor;
- 2) Tunable sensor using dampening of microstructure to tune sensor;
- 3) Sensor with a detecting means utilizing light for determining movement of the microstructure;
- 4) Sensor with a detecting means utilizing capacitive sensing for determining movement of the microstructure;
- 5) Sensor with a detecting means utilizing a resistance measuring for determining movement of the microstructure;
- 6) Sensor with a detecting means which determines a change in resonance of the microstructure to determine movement of the microstructure;
- 7) Sensor with a detecting means which determines a change in voltage across the microstructures of the sensor array;
- 8) Sensor array with means for detuning neighboring microstructures using energy other than acoustic energy; and
- 9) Sensor array with means for detuning neighboring microstructures using dampening of the neighboring microstructures.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 5, 10, and 14 are generic to all species, claims 19-20 are generic to species 1, 3, 4, 6, and 7, and claim 26 is generic to species 3, 4, 5, 6, 8, and 9.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

2. A telephone call was made to Larry A. Roberts (Reg. 31,871) on 01 March 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

3. Applicant is cautioned to review the Elected Species of Parent Application 09/397,276 as most of the species recited above were rejoined in the Parent Application due to the allowance of a generic claim. An election of a previously prosecuted species could result in a Double Patenting Rejection if the claims are not sufficiently different to warrant two separate Patents.
